Batch: **Fall AI 2022**

GOAL:

We are a team of four—Muhammad Abdullah, Muhammad Zohaib Afzaal, Arham Mahmood, and Moeez Ahmed—working on a deep learning project focused on **clothing classification**. Our goal is to develop a system that accurately classifies various clothing items, such as bags, trousers, shirts, and more. Utilizing advanced deep learning techniques, our approach will involve multiple layers to enhance accuracy and efficiency in identifying clothing types. Further details on the implementation will be shared as we progress.
